

PlanWorks Temporal Extent View

Lays out all predicates on a time scale, with triangles denoting the start and end variable values:

The range of extent is shown by a horizontal line. The extent line and associated triangles are displayed immediately below each predicate node. Downward triangles are start times, upward triangles are end times, leftward triangles are -Infinity, and rightward triangles are +Infinity. Mouse cursor over start/end interval "triangles" displays their time scale value. Mouse cursor over a token's duration line displays the duration interval. Mouse cursor over the token node displays "predicateName(parameterValues)" on the first line, and its slot key value on the second line.

Clicking Mouse-Right on the view background will pop-up a menu, one of whose selections is "Set Time Scale Line". Selecting it will cause a red vertical time scale line to be drawn. A Mouse-Right "Set Time Scale Line" selection at another location will move the time scale line. "Hide/Show Node Labels" is another available selection, where the large label rectangles vanish and the token duration line expands to a thick bar. Mouse-Right also offers

"Show Earliest" and "Show Latest", as options to "Show Intervals".
